Important Instructions:

- Any instance of cheating or plagiarism will result in a *F grade*.
- Deadline: 11 Nov, 2025 11:59 PM

Session and Cookie Management in an ASP.NET MVC Shopping Website

Scenario Description:

You are developing a **mini online shopping website** using **ASP.NET MVC**. The system must remember some user information using **Cookies** and **Session** so that the user's experience is smooth and secure.

The website has two main parts:

1. Login Page (Session-based)

When the user logs in with their **Email** and **Password**, these values should be stored in **Session**.

- If the session expires or the user logs out, this information should be cleared.
- After login, the user should be redirected to the **Home page**, which displays their email from the session (e.g., "Welcome back, user@example.com!").

2. Shopping Cart Page (Cookie-based)

On the **Product Listing Page**, each product has an "Add to Cart" button.

- When the user adds a product, its name and price should be stored in a **Cookie** named **UserCart**.
- The cart cookie should **persist for 2 days**.
- If the user revisits the site within 2 days, the products should still appear in the cart.

- Provide a “**Clear Cart**” button that deletes the cookie.
-

Homework Tasks:

1. Create Controllers and Views

- `AccountController` for Login, Logout, and Home.
- `ShopController` for Product Listing and Cart display.

2. Implement Session Management

- Store user's email and password in session on login.
- Display user's email on Home page using session.
- Clear session on logout.

3. Implement Cookie Management

- Add products to cookie when user clicks “Add to Cart”.
- Display cart items from the cookie on Cart page.
- Delete cookie when user clicks “Clear Cart”.

Expected Output / Behavior:

- User logs in → Session created → Redirect to Home.
- User adds products → Cookies created and persist.
- After browser restart, cookies still show the cart.
- Logout clears only session, not cart cookie (cart persists).
- Clear Cart deletes cookie completely.
